## **SWMS Scope**

This SWMS covers safety inspection and testing of Fixed Residual Current Devices (RCD's) and Portable Residual Current Devices (PRCD's) in the workplace using a portable appliance tester with electronic push-button/function key testing functionality.

Includes Fixed and Portable RCD's:

- Type I not exceeding 10 mA
- Type II 10mA to 30mA.

Portable RCD's include:

- Class L single phase primarily intended for household and similar general use
- Class H primarily intended for general industrial use
- Class PSOA class H assembly with two or more socket outlets minimum rating IP 33.

Refer to separate specific SWMS for Testing & Tagging of electrical cords and Class 1 & Class 2 electrical equipment.

If ever you are unsure, seek advice from a licensed Engineer/Electrician.

# **Personal Protective Equipment (PPE)**

Ensure all PPE meets relevant Australian Standards. Inspect, and replace PPE as needed.

AS 1319-1994 Safety signs for the occupational environment reproduced with permission from SAI Global under licence 1210-c062. Standards may be purchased at <a href="http://www.saiglobal.com">http://www.saiglobal.com</a>

Do not continue if the DUT fails the test - Attach "Out of Service" tags and inform owner of the DUT that it cannot be used until made safe by qualified person (such as electrician).

#### **Conduct Current testing:**

- Press the appropriate test buttons/function keys on the PAT to test the trip time.
- Note pass or fail as required:
  - Type I maximum current 10 a.c. mA
  - Type II maximum current 30 a.c. mA

## If the DUT has passed all testing:

- Note appliance number for logbook and print out records
- Unplug the DUT from the PAT (and RCD isolating transformer if used) and reconnect any equipment that was disconnected.

Do not continue if the DUT fails any test - Attach "Out of Service" tags and inform owner of the DUT that it cannot be used until made safe by qualified person (such as electrician).

RB: 4A Person responsible to implement control measures: RA: 2M

## Job Step: Tagging

#### Hazards include:

- Electricity Energised electrical equipment
- Falls on the same level
- Hazardous Manual Tasks:
  - awkward, twisting, bending positions
  - lifting, carrying, or putting down objects
  - o repetitious movements.

#### Risks include:

- Electric shock
- Electrocution
- Falling over on same level causing bruises, sprains, strains, fractures
- Muscular stress
- Musculoskeletal Disorder.

## For DUT's that pass testing:

Remove tag from the DUT if it has been inspected previously.

Apply a new tag to the DUT that includes:

- Date of testing
- Outcome of testing
- Due date for the next inspection
- Plant number or inspection number of the DUT
- Licence/certificate number, printed name of the licensed electrician or trained competent person who carried out the test and filled in the tag.

## Ensure that all tags:

- Are durable and water resistant
- Are non-metallic
- Are self-adhesive or positively secured
- Cannot be re-used
- Have a bright, distinctive surface.

Tags may be colour coded to identify:

- Month DUT was tested
- Duration of interval between testing, e.g. 3, 6, 12, 24 months, etc.

If tags do not contain all of the information required, the rest of the information must be recorded in the Site

DOCUMENT NO: 10391	VERSION NO: 2	ACTIVITY: Test and Tag – Reside	ential Current Devices (RCD)'s	REVIEW NO:	DATE:
AUTHORISED BY:			SIGNATURE:		DATE:

Electrical Register. If tags are not used the DUT must be marked / labelled so that record of testing in the Register can clearly identify the relevant equipment. Prepare/update Site Electrical Equipment Register. Include in the Register: The date of the inspection The due date for the next inspection The plant number or inspection number of the DUT The results of the tests and inspections Details of any repair/maintenance work required as a result of the inspection The licence/certificate number, printed name and signature of the trained competent person who carried out the inspections and tests. Pushing the "trip test" button to ensure the RCD is effective should test a new portable RCD. RB: 1L Person responsible to implement control measures: RA: 1L Job Step: Maintenance Hazards include: Check that the PAT has not been damaged during use. Risks include: Electricity - Energised electrical Electric shock Ensure the PAT is packed away and stored in its supplied container/packaging to avoid damage. equipment Electrocution Falls on the same level Falling over on same Hazardous Manual Tasks: level causing bruises, Schedule annual calibration of the PAT. o awkward, twisting, bending positions sprains, strains, o lifting, carrying, or putting down fractures objects. RB: 3H Person responsible to implement control measures: RA: 2M Muscular stress.

DOCUMENT NO: 10391	VERSION NO: 2	ACTIVITY: Test and Tag – Residential Current Devices (RCD)'s		REVIEW NO:	DATE:
AUTHORISED BY:		S	SIGNATURE:		DATE:

## **Emergency Procedures / Emergency Response**

Develop and implement an emergency response plan for the site. Include:

- Assembly points
- Communication
- Consultation methods
- Responsible persons
- Emergency contacts names and phone numbers
- First aid equipment
- Fire Extinguishers accessible & serviced.

Develop site-specific rescue procedures/SWMS.

Ensure all workers on-site are trained and familiar with emergency and evacuation procedures.

### Person/s responsible to implement and follow emergency procedures and control measures:

#### Review

To ensure controls are implemented and monitored effectively:

- Toolbox /pre-work meetings will be undertaken
- Relevant persons will be consulted on hazards and contents of SWMS, work plans and other applicable information
- Control measures will be monitored throughout works:
  - Spot checks
  - Consultation
  - Scheduled audits
- Corrective actions will be recorded and rectified in a timely manner SWMS will be reviewed and updated accordingly (in consultation with relevant persons).

Ensure all controls are reviewed as per the following:

- If controls fail to reduce risk adequately
- When changes to the workplace or work activity occur that create new / different risks where controls may no longer be effective
- New hazards identified
- After an incident involving work activities relevant to this SWMS
- During consultation with relevant persons indicate review is needed
- A Health and Safety Representative (HSR) requests a review in line with the requirements of the legislation.

# RISK ASSESSMENT MATRIX

HB 436:2004 Risk Management Guidelines Tables 6.3 – 6.8 reproduced with permission from SAI Global under licence 1210-c062. Standards may be purchased at <a href="http://www.saiglobal.com">http://www.saiglobal.com</a> References: Safe Work Australia (2011) - Code of Practice: How to Manage Work Health and Safety Risks, AS/NZS 31000 -2009 Risk Management Principles and Guidelines.

Step 1: Determine Likelihood What is the possibility that the effect will occur?							
Criteria Description							
Almost certain	Expected in most circumstances.	Effect is a common result					
Likely	Will probably occur in most circumstances.	Effect is known to have occurred at this site or it has happened					
Possible	Might occur at some time	Effect could occur at the site or I've heard of it happening					
Unlikely	Could occur at some time	Effect is not likely to occur at the site or I have not heard of it happening					
Rare	May occur only in exceptional circumstances	Effect is practically impossible					

lea	ealth and Safety Risks, AS/NZS 31000 -2009 Risk Management Principles and Guidelines.							
	Step 2: Determine Consequence							
	What will be the expected effect?							
	Level of Effect: Example of each level:							
	Insignificant/Acceptable	No effect – or so minor that effect is acceptable						
	Minor	First aid treatment only; spillage contained at site.						
	Moderate	Medical treatment; spillage contained but with outside help.						
	Major	Extensive injuries; loss of production						
	Catastrophic	Death; toxic release of chemicals						

Step 3 Determine the risk score									
Consequence									
Likelihood Insignificant Minor Moderate Major Catastrop									
Almost certain	3 High	3 High	4 Acute	4 Acute	4 Acute				
Likely	2 Medium	3 High	3 High	4 Acute	4 Acute				
Possible	1 Low	2 Medium	3 High	4 Acute	4 Acute				
Unlikely	1 Low	1 Low	2 Medium	3 High	4 Acute				
Rare	1 Low	1 Low	2 Medium	3 High	3 High				

Step 4 Record risk score on worksheet (Note – Risk scores have no absolute value and should
only be used for comparison and to engender discussion.)

Score	Action
4 A: Acute	ACT NOW – Urgent - does something about the risks immediately. Requires immediate attention.
3 H: High	Highest management decision is required urgently.
2 M: Moderate	Follow management instructions.
1 L: Low	OK for now. Record and review regularly, and if any equipment/people/materials/work processes or procedures change.

	1
